## AMWAY PRODUCTS: THE "GOLD STANDARD"

All Amway products are manufactured in our state of the art factory at our World Headquarters in Ada, Michigan, USA.

Amway consistently maintains a "Gold Standard" policy in terms of meeting the highest standard possible. The products that are awarded this "Gold Standard" are amongst the finest of their kind in the world, if not the finest.

All our products match, and generally far exceed, the International Standard Organisation (ISO) specifications, as followed by most First World countries.

Our products certainly comply with, and exceed, the ISO 9000 standard for Manufacturing Standards, as well as the ISO 14000 Environment Control.

We are in fact proud of the award given to Amway by the United Nations for our Environment Policy.

Our Research and Quality Assurance Scientists have copies of the Standards as laid down by respective government control bodies throughout the world for, amongst others, home care and personal care products. The standards are, in the opinion of our Amway Research and Development Scientists and Quality Control Scientists opinions, in most cases very basic and are written keeping the local manufacturing companies in mind.

A user of Amway brand products can have total confidence that the product is manufactured to the world's finest standard.
